

APPLICATION STORIES

The Application:

This customer was seeking a linear motion solution to help reduce their overall costs. Their current hydraulic wire draw system was too expensive to buy, install and maintain. Additionally, the system was difficult to control for position in mid-stroke.

The Solution:

The Pacific Bearing territory manager and local distributor recommended the Simplicity® Heavy Duty Slide System using a 2LRPS-24-048. Ready to mount to the sub-structure, this heavy duty slide has enough strength and durability to withstand this demanding and dirty environment. The built-in ball screw makes mid-stroke positioning easy.

Maintenance on their retrofitted machine is much easier, and purchasing a new one would've cost them thousands of dollars.

Slide Features:

- Wide temperature range
- High load capacity
- High shock loading capabilities
- Dampens vibration
- Self-lubricating
- Tolerates contaminated environments
