

# FOOD PACKAGING CELEBRATES SIMPLICITY®

*"Machine design plays an important role in sanitation", acknowledges food packaging machinery specialists at S.V. Dice Designers of Walnut, CA. While engineering a Polybag Un-cuffer/ Folder/Sealer Machine, designers sought components that would not trap or emit contaminants while providing continuous, reliable operation.*

Fourteen self-lubricating Simplicity® bearing + pillow block assemblies were applied throughout the machine to maintain impeccable sanitation standards.

**Simplicity®  
Bearing +  
Pillow Block  
Assemblies**

## **PACIFIC BEARING'S SIMPLICITY® PRODUCT ADVANTAGES:**

- Self-lubricating - Requires no lubrication, emits no particulates, is easily washed down
- Maintenance free
- Tolerates temperature extremes from -400°F to +500°F
- Will not catastrophically fail
- 4 to 20 times higher load capacity than linear ball bearings
- No seals required

**SMOOTH & QUIET LINEAR MOTION**
