PBC Linear Receives Annual Carestream Health Award for 2008

Celebrating Excellence in Quality and Service

Rockford, IL – September 12, 2008 - - - PBC Linear has just received the Carestream Health Award for excellence in quality standards for 2008. With an astoundingly low product failure rate—less than three parts per million, 100% on time delivery, and a huge impact on cost savings for Carestream, PBC Linear was delighted to accept this year's award.

Carestream supplies the medical industry with imaging technology used in X-ray machines. PBC Linear provides Carestream with their D075 Uni-guide system with modified carriages for mounting components. This product is installed into the heart of Carestream's X-ray imaging system. This system mounts directly on the Uni-guide and relies on the product's smooth and accurate linear motion to receive correct images. Uni-guide's simple, self-lubricating, two-piece assembly allows for the product to be easily installed and operate more accurately than re-circulating ball technology, significantly reducing product failure rate.

Manufactured by PBC Linear in Roscoe, Illinois, the Uni-Guide can be shipped as soon as the product is assembled. The Uni-guide is carefully matched, carriage to rail, and hard aluminum anodized to support a long life-span. Also, with PBC Linear's patented self-lubricating technology, the Uni-guide can provide contaminant free linear motion that never requires additional lubrication. This allows for a huge life-span cost savings for the customer.

On time delivery is crucial in the medical field, and PBC Linear makes a conscious effort to make certain the correct product arrives before or by the expected ship date. PBC Linear is pleased to report a 100% on time delivery rating with Carestream.
